PROFESSIONAL SUMMARY

Flutter Developer with over a year of hands-on and intensive training experience in building scalable, maintainable, and high-performance cross-platform mobile applications using Flutter and Dart. Experienced in designing clean and modular architectures, implementing advanced state management solutions, integrating RESTful APIs, and developing production-ready applications following industry best practices. Strong understanding of software engineering principles including SOLID, Design Patterns, Dependency Injection, and Clean Architecture. Experienced in collaborating within Agile development teams using professional tools such as Jira, Slack, and Compass, while following Git Flow and CI/CD workflows. Passionate about writing clean, reusable, and testable code with a continuous focus on performance optimization and user experience.

TECHNICAL SKILLS

- **Flutter & Mobile:** Flutter SDK, Responsive & Adaptive UI, Custom Widgets, Animations, Performance Optimization.
- **Architecture & Scalability:** Clean Architecture, MVVM, MVI, Feature-First Architecture, SOLID Principles, Design Patterns, Dependency Injection.
- **State Management & DI:** BLoC, Cubit, Provider, get_it, injectable, Service Locator.
- **Backend & Integrations:** REST API Integration, Dio, HTTP, Firebase Authentication, Cloud Firestore.
- **Local Storage:** SharedPreferences, Flutter Secure Storage, Hive.
- **Dart Advanced:** Async / Await, Futures, Streams, Isolates, Mixins, Extensions, Generics, Records & Patterns, Null Safety.
- **Testing:** Unit Testing, Widget Testing, Integration Testing.
- **Version Control & DevOps:** Git, Git Flow, GitHub, CI/CD, GitHub Actions.
- **Collaboration & Tools:** Agile Methodology, Scrum, Jira, Slack, Figma, Postman, Code Review.

PROFESSIONAL EXPERIENCE

Flutter Instructor, [IEEE Benha University Branch](#) (2026 Season)

Delivered Flutter technical sessions covering Flutter fundamentals, Dart programming, state management, and architecture.

Mentored students through practical projects and code reviews, and assisted trainees in building production-level Flutter applications.

Participated in planning technical content and organizing learning activities.

Flutter Trainee, [National Telecommunication Institute \(NTI\)](#) (5-Month Internship)

Completed intensive training in professional Flutter development and built scalable mobile applications using Clean Architecture and BLoC.

Integrated REST APIs and Firebase services, working on real-world team-based development scenarios using Git workflows.

Flutter Trainee, [Information Technology Institute \(ITI\)](#) (4-Month Internship)

Developed production-style Flutter applications applying software engineering principles and best coding practices.

Worked with modern Flutter architecture, state management techniques, and gained experience in collaborative software development.

Flutter Trainee, [GDG On Campus Benha](#) (2026 Season)

Participated in handcrafted Flutter training sessions and workshops to build multiple mobile applications following industry best practices.

Collaborated with peers on real-world development tasks.

PROJECTS

Shopping Mobile Application (API-Based)

Tech: Flutter, Dart, Clean Architecture, MVI, Bloc/Cubit, Dio, REST API

Collaborated within a development team to build a scalable, production-grade e-commerce application.

Implemented Clean Architecture combined with the MVI design pattern for predictable state flow and high testability, utilizing BLoC/Cubit for robust state management.

Integrated Dio for secure and structured network operations, handling cart workflows and dynamic calculations efficiently.

E-Commerce Mobile Application (API-Based)

Tech: Flutter, Dart, REST API, Clean Architecture

Designed a modular, clean-architecture-based app using HTTP endpoints, featuring cart logic with dynamic calculation and Provider state synchronization.

Aura AI - AI Chat Mobile Application (API-Based)

Tech: Flutter, Dart, Groq API

Integrated with Groq API for streaming real-time AI conversations, implemented local chat persistence using SharedPreferences and Provider.

Real-Time Chat Mobile Application (Firebase-Based)

Tech: Flutter, Dart, Firebase Authentication, Cloud Firestore, Streams

Developed a real-time messaging application featuring secure Firebase Authentication and user search capabilities.

Implemented live chat rooms with instant message synchronization using Firestore streams, ensuring real-time bidirectional communication just like popular messaging apps.

Flutter Book Store Application

Tech: Flutter & Dart

Created full user journeys with splash workflows, form-validated login, detailed book listings, and dynamic pricing managers via Provider.

EDUCATION

B.Sc. in Computers and Artificial Intelligence | [Benha University](#)

Department / Focus: Software Engineering, Object-Oriented Programming, Data Structures, Algorithms, Databases, and Mobile Application Development.
